COMPANY NEWS

June 2014

Eriez presents new overband magnet at [Hillhead 2014](#)

Eriez Magnetics Europe Ltd, leading authority in separation technologies presents its brand-new [Suspended Permanent Magnet](#), the CPRE at the Hillhead Quarrying, Construction and Recycling Tradeshow. This international show, in a working quarry, is held at Hillhead Quarry, Buxton between the 24th and 26th of June 2014.

Eriez' new Rare Earth Permanent Overband Magnet provides an alternative solution to the mobile market. 60% lighter than Eriez standard CP model it provides the same high separation performance in terms of strength and reject rate without the weight.

Eriez will also display for the first time at Hillhead, a Self-Cleaning Suspended Electromagnet, the model SE725 R800 SC2. Eriez's range of electromagnets benefits from over 70 year experience in separation technology and are the ultimate in magnetic separation. Suspended electromagnets are particularly suitable for materials conveyed in heavy burden depths.

In addition to the new CPRE and Electromagnet, Eriez will also be exhibiting its popular CP (Centre Pole) and TP (Twin Pole) models which can be selected for specific applications.

To complete the range of equipment on the stand, Eriez will demonstrate one of its industrial metal detectors, the [Metalarm MA3500 Bridge Coil Metal Detector](#) featuring bag dropper and Eriez Spymet Metal Locator. The MA3500 is part of Eriez wide range of established industrial metal detectors that provide unparalleled protection to expensive machinery.

The Eriez team will be on stand G11, outside the pavilion. If you wish to make an appointment with one of the team, please contact us on +44(0)29 2086 8501 or email at info@eriezeurope.co.uk.
