COMPANY NEWS – Recycling Industry

June 2015

ERIEZ LAUNCHES NEW DEDICATED RECYCLING TEST CENTRE

Eriez launches a pioneering, purpose-built recycling separation test centre at its European headquarters near Caerphilly in South Wales, UK. Sales representatives from across the globe visit the new facility, which allows customers to test their materials and see exactly how Eriez magnetic separators can help recover more materials and improve profits for the recycling industry.

Efficient separation of materials has historically been a difficult task for the recycling industry - until now. As a result of the ongoing success of supplying their equipment to customers in the recycling industry, a state-of-the-art test centre at Eriez Magnetics Europe has been established. The recycling centre allows customers to visit with bulk samples of material and see how accurately and efficiently the range of equipment on offer separates it, helping to determine which combination of machinery is the best fit for their waste processing needs. There has been a significant injection of investment to create the test facility which is equipped with Eriez' full range of recycling products, including their complete line of eddy current separators, vibratory feeders and metal detection equipment. The machines can handle bulk samples of any material from course to fine. The new facility compliments their existing fully-equipped laboratory, offering the ideal solution for any company that has a need to process waste effectively.

Earlier this month, Eriez' agents and distribution partners from around the globe visited the European headquarters for a recycling conference, which provided them with the opportunity to experience hands-on testing of various materials in the new test centre and to celebrate the launch of this significant development for the company. The recycling conference ensured that all agents and business partners

were brought up to date with the new range of innovative products, developed as part of Eriez' continuing commitment to developing the solutions they offer to the recycling industry.

Gareth Meese, Sales Director at Eriez Europe commented on the launch of the new test facility and the significance of the recycling conference: "The new centre demonstrates our ongoing commitment to providing customers in the recycling industry with the best solutions possible for processing their waste. In-depth testing of materials allows us to select the most effective equipment dependent upon specific customer requirements. The recent recycling conference was a great success and ensured that all our sales representatives from around the globe are fully aware of the new range of equipment we can supply and the unprecedented levels of materials which can be recovered efficiently. "

For further details on our equipment or to request a visit to our test facility, please contact Tristram Hubbard-Miles, Technical Sales Executive for Recycling on +44(0)29 2086 8501 or E-Mail info@eriezeurope.co.uk
